

Simplifying Endpoint Protection for Enterprise Laptops, Desktops, Servers & Cloud

Endpoint protection is your security front line of defense and attackers know your endpoints are weak. Too much complexity, protection that doesn't work, and a lack of visibility will swamp your teams resulting in inevitable failure, preventable security breaches, and unnecessary costs. It costs 10 to 100 times more to recover from a security breach than it does to prevent it. So, do nothing and pay big later, or take back control now.

Artificial intelligence, the cloud, and a lack of security resources are driving a generational shift toward simplifying endpoint protection. Ziften's Zenith endpoint protection platform is a single product that stops cyber-attacks on all enterprise endpoints – laptops, desktops, servers, and cloud. The single agent deploys quickly enabling advanced protection, endpoint detection and response, plus security posture analysis.

The Ziften Zenith Difference

Unlike products with complex technologies that fail to stop attacks, and provide little to no investigation and response capabilities, Ziften delivers:

- 1 **Best-in-Class Zero-Day Protection**
- 2 **Complete Investigation**
- 3 **The Most Flexible Response**
- 4 **Security Posture Analysis**

The result – simplified endpoint protection to easily stop cyber-attacks with the people and budget you already have.

 Product Markets EPP & EDR	 Zero Day Protection 99.6% Effective	 Largest Deployment 110K Endpoints	 Channel Program Activate

Ziften Products and Services

Ziften Zenith

The Ziften Zenith endpoint protection platform (EPP) is a single product built on artificial intelligence (AI) and the cloud, that simplifies stopping cyber-attacks on enterprise endpoints. The single agent joins attack protection including best-in-class zero-day coverage, with endpoint detection and response, and continuous security posture analysis.

Ziften Services

Let Ziften help assess and secure your organization. Ziften provides unmatched visibility into your physical and virtual IT assets, whether on- or off-network, in the cloud, or in your data center. Ziften's Assess, Hunt, and Respond services augment your teams by working directly with your staff of executives, IT and security operations personnel.
